

**Challenge:** Red Stealer Lab

**Platform:** SOC Analyst Tier 1

**Category:** Threat Intel

**Tactics:** Execution, Persistence, Privilege Escalation, Stealth, Defense Impairment, Discovery, Collection, Impact

**Tools:** Whois, VirusTotal, MalwareBazaar, ThreatFox, ANY.RUN

**VIEWS LAB:** [link](#)

**Kịch bản:** Analyze a suspicious executable using VirusTotal and MalwareBazaar to extract IOCs, identify C2 infrastructure, MITRE ATT&CK techniques, and privilege escalation mechanisms.

Q1

Categorizing malware enables a quicker and clearer understanding of its unique behaviors and attack vectors. What category has Microsoft identified for that malware in VirusTotal?

Q2

Clearly identifying the name of the malware file improves communication among the SOC team. What is the file name associated with this malware?

Note: Don't include the file extension in the name.

Q3

Knowing the exact timestamp of when the malware was first observed can help prioritize response actions. Newly detected malware may require urgent containment and eradication compared to older, well-documented threats. What is the UTC timestamp of the malware's first submission to VirusTotal?

Q4

Understanding the techniques used by malware helps in strategic security planning. What is the MITRE ATT&CK technique ID for the malware collecting data from the local system prior to exfiltration?

Q5

Following execution, the malware performs a connectivity check by resolving a well-known social-media domain before contacting its C2. Which single domain does it resolve for this check?

Q6

Once the malicious IP addresses are identified, network security devices such as firewalls can be configured to block traffic to and from these addresses. Can you provide the IP address and destination port the malware communicates with?

Q7

YARA rules are designed to identify specific malware patterns and behaviors. Using MalwareBazaar, what's the name of the YARA rule created by "" that detects the identified malware?Varp0s

Q8

Understanding which malware families are targeting the organization helps in strategic security planning for the future and prioritizing resources based on the threat. Can you provide the different malware alias associated with the malicious IP address according to Malpedia?

Q9

By identifying the malware's imported DLLs, we can configure security tools to monitor for the loading or unusual usage of these specific DLLs. Can you provide the DLL utilized by the malware for privilege escalation?
